Skills

Game Engine: Unreal Engine
Programming: C++
Tools: Git, Visual Studio, JetBrains Rider

Projects

Multiplayer Shooter Game - [Link](#)

Unreal Engine - C++

- Developed a networked third-person multiplayer shooter in Unreal Engine using C++, implementing gameplay replication and lag compensation for smooth, fair combat across clients.
- Integrated Steam's Online Subsystem to handle matchmaking, session creation, and session management for multiplayer lobbies.
- Designed and implemented 3 distinct game modes, multiple weapon types, and a buff system to enhance gameplay variety.

AURA - [Link](#)

Unreal Engine - C++, Blueprints

- Built a top-down action RPG in UE5 (C++) using GAS, with custom Attribute Sets, Gameplay Effects, and Abilities driving combat and progression.
- Designed a leveling system using Gameplay Effects and ExecCalcs to grant attribute and spell points on level-up.
- Implemented ability unlocking/upgrades via Gameplay Tags, and enemy AI using Behavior Trees and Blackboards.
- Added a loot-drop system with pickup actors that modify player resources through the Attribute Set.

Multiplayer Subsystem Plugin - [Link](#)

Unreal Engine - C++

- Built a reusable, plug-and-play Online Subsystem plugin to streamline multiplayer session management across Unreal Engine projects.
- Implemented core networking features including session creation, session search, joining, and seamless travel between maps.
- Reduced multiplayer setup time for new projects by abstracting session-handling logic into a modular, drop-in system.
